

# Optimum Energy's Retro-Commissioning Services Offer Significant Building-Side Savings

## Why Optimum Energy Retro-Commissioning (RCx)?

Optimum Energy's RCx offers a comprehensive turn-key service that combines engineering expertise with advanced building automation system programming to deliver energy savings and optimization across all major systems, bridging the gap between Engineering and Building Automation Contractors."

### The Benefits of RCx:

1. Increased Energy Savings

2. Improved Comfort

3. Extended Equipment Life

4. Sustainable Practices

5. Compliance & Certifications

6. Financial Incentives

7. Increased Operational Efficiency

8. More Data & Insights

**1. Increased energy savings:** RCx can identify inefficiencies and recommend improvements that can lead to significant reductions in energy consumption. This can result in lower utility bills and operational costs.

**2. Improved Comfort:** Optimizing building systems can enhance the indoor environment, leading to more consistent temperatures, better air quality, and overall improved comfort for occupants.

**3. Extended Equipment Life:** Regularly assessing the condition of and maintaining building systems can prevent premature wear and tear, thus extending the lifespan of equipment and reducing the need for costly replacements.

**4. Sustainable Practices:** By reducing energy consumption, you can lower your carbon footprint and reach environmental sustainability goals, while enhancing the company's reputation as an environmentally responsible organization.

**5. Compliance and Certification:** RCx can help businesses comply with local building codes and standards. Additionally, it can support efforts to achieve green building certifications, such as LEED (Leadership in Energy and Environmental Design).

**6. Financial Incentives:** Many utilities and government programs offer rebates and incentives for businesses that undertake energy efficiency projects, including RCx, reducing the cost of this process.

**7. Operational Efficiency:** Identifying and correcting operational issues can lead to smoother and more reliable building operations. This reduces downtime and the likelihood of unexpected breakdowns, leading to more consistent business operations.

**8. Data and Insights:** The RCx process involves detailed analysis and monitoring of building performance. This data can provide valuable insights into how the building operates and highlight areas of opportunity for future improvement.
